

Midgeater

Biting midges can detect carbon dioxide, which is found in exhaled breath, from more than 100 meters.

By installing an Andrews Midgeater you are fighting back against the midge menace.

The Midgeater works by mimicking a large animal, emitting carbon dioxide mixed with a special scented bait which makes the midge think that it has found a bovine meal. However, midges which follow the plume of carbon dioxide to its source find only the Andrews Midgeater.

Specifications	
Gas Type	Propane 13p
Gas Supply pressure	37mbar
Normal Heat Input	0.25kW
H x W	1.10m x 520 cm
Weight	30kg (without gas cylinder)
Weight of Patio Gas cylinder	13kg
Regulator	27mm clip-on
Colour	Green RAL6020
* Should only be used for insect capture and outdoor use
