

# Case study 624

## Minivac eco now available for hire

Following the unveiling of the new Sykes Pumps Minivac eco, we are delighted to announce that we have taken delivery of these units at our depots nationwide. The units are now available for immediate distribution and have been specifically designed with construction, industrial and engineering applications in mind.

An initial consignment has been manufactured and distributed, with additional units set to join the fleet over the coming months. This recent innovation once again highlights our continued effort to expand the Sykes Pumps range and ensure clients benefit from the mechanical progress made in our field.

The Minivac eco is part of our General Purpose range and affords customers vast savings compared to similar models supplied elsewhere. A fantastic fuel economy enables a reduction in energy costs of approximately 50% - or £15 per day. Low exhaust emissions also underpin our commitment to being an environmentally conscious organisation – substantiated by our compliance with the latest EU standards.

Demand for the Minivac eco is expected to peak quickly as targeted businesses look to get hold of the most advanced technology currently on the market. To hire one or several of our premium pumps, or to discuss how they can benefit your particular operation, call us today on 0800 211 611.

Performance Max head: 28 m, Max flow: 15 l/s, Max solid: 28 mm

Weight 180 kg with fuel, 168 kg without fuel

Weight 1350 x 600 x 840
