Facility Management Company Assisted By Andrews Heat For Hire

A facility management company contacted Andrews Sykes to provide a temporary heating solution for their client's office space. The building which included a number of offices and meeting rooms, required a heating solution whilst their fixed system was being taken out of commission.

We provided 26 oil filled radiators which were strategically placed throughout the building. These elegant easy to use oil filled radiators, produce 2.5kw of heat and has a built in thermostat for fully automatic operation. The heater operates economically from a standard domestic 240 volt socket. These units selected as they are safe in operation and have low power requirements, as well as being aesthetically pleasing.

Our wide range of portable, energy-efficient heating units guarantee high amounts of safe, fume-free heating for establishments of all types of measurements. We understand the consequences of interruptions therefore we move quickly and efficiently to ensure the best solution for you.

We scheduled the delivery of the heaters, along with the Facilities Manager to ensure only minimal disruption to the client. The company and their clients were very happy with the temporary solution.

Facility management is a profession that encompasses multiple disciplines to ensure functionality of the built environment by integrating people, place, process and technology. At Andrews Heat for Hire we excel in providing comfortable and appropriate environments for your clients.
