Leisure Centre Heating

One of the largest property services companies in the UK contacted Andrews Boiler Hire to enquire about the price of hiring a temporary boiler for a leisure centre. After ringing 0800 211 611 to speak to a specialist in our contact centre, a quote was sent to the company immediately. The hire was then arranged in advance of the boiler being installed in the autumn.

A temporary boiler was necessary to maintain the water temperature of the swimming pool during a planned replacement programme. Initially, the services company were unsure whether or not to use a natural gas or diesel fired boiler, however a dedicated Andrews Sykes boiler specialist proposed a 500kW boiler be supplied and powered by the existing natural gas.

The boiler was required to supply heating and domestic hot water to the leisure centre, yet there was only a small amount of time during which the installation could be carried out. The unit was delivered to the car park adjacent to the pool and then craned in to position by the building services company. The client requested an out of hour's installation and commissioning which was carried out at 10pm in the evening to ensure that there was minimal disruption to the day to day pool opening times.

The installation also had to be carried out before the Saturday so that the pool could open at a normal time the following day. Despite restricted access and time limitations, the unit was delivered and installed on time, at a very competitive price. This meant that the leisure centre stayed open during normal opening hours and services were not disrupted, therefore satisfying the client needs.

Power supply 240 V 1 ph N+E 50 Hz Run 10A
Noise level (max) 45 dBA @ 10 metres
Weight 2,500 kg
Dimension 3,000 x 2,400 x 2,400 mm
Fuel consumption 60 ltrs/hr
Fuel type Gas Oil
Plug type BS4343 5 pin 32 amp
