

Case study 212

Replacement Of A 250 kW Boiler For Stirling Council

Once the capital of Scotland, Stirling holds a variety of impressive landmarks and endless history, as well as being home to the Stirling Council.

Stirling Council handles a range of government work for the city, and maintaining the correct temperature inside the building is crucial to uphold the best working environment possible. The project involved the main boiler being replaced, and the requirement for temporary heating inside the building. After a thorough evaluation and various quotes from our specialist team at Andrews Boiler Hire, we supplied the site with a 250kW natural gas fired boiler. The 250kW Boiler provides a fast efficient solution to a wide range of applications that require heating and hot water. This Boiler is housed in a sturdy vandal proof steel container and is capable of delivering heat safely and efficiently.

Being a natural gas boiler, the Stirling Council connected their existing gas supply to the temporary boiler ensuring all safety standards were met.

One specific challenge that Andrews Boiler Hire came across was the logistics of positioning the boiler, as the access into the council building was via a single track road. The challenge was overcome by our specialist team and in a matter of hours the temporary boiler was completely installed. The boiler was supplied for 6 weeks, enabling to ensure the council building was kept at the correct temperature and that the council personnel were able to continue working.

All Andrews Boiler engineers, based at our depots throughout the UK, are fully trained and can offer expert advice on the right equipment for your project, either by phone or by a free site survey. We can deliver to virtually any site no matter how remote

Power supply 240 V 1 ph N+E 50 Hz Run 10 A
Plug type BS4343 16 A
Noise level (max) 45 dBA @ 10 metres
Fuel Consumption 31 ltrs/hr
Weight 2,000 kg
Fuel type Gas Oil (natural gas burner available)
Dimension 3,000 x 2,400 x 2,400 mm
