Workshop Production Line Kept Cool

Workshop environments can be cramped and hot to work in. Production lines and other machinery can cause overheating in the factory space and become very discomforting for the staff.

When a popular beverage company needed cooling for their factory space, Andrews Air Conditioning Hire was on site within 2 hours of the initial call. Having worked with Andrews Sykes for many years, the client had originally requested information on our range of evaporative units, after discussing the application with our cooling specialists, we recommended that the best solution would be to use a number of our cyclone evaporative coolers, units instead, due to the size of the area.

We delivered and installed four cyclone units, these were placed strategically throughout the building to ensure maximum efficiency. Cyclone Dx portable evaporative coolers are a good alternative to portable air conditioning and are often used where access to the outside is difficult or impractical. The coolers created a fresh breeze cooling effect and kept the working staff comfortable on the production lines.

The client which incorporates two of the UK's biggest soft drinks brands, were very pleased with the result and will continue to use Andrews Sykes in the near future.

Power supply 220/240 V 1 ph 50 Hz
Weight 70 kg Full 25 kg Empty
Dimension 600 x 530 x 550 mm
Reservoir capacity 45 litres
Average power consumption 300 W/hr
Air Delivery 2,550 m³
Water Consumption 10 ltr/hr (approx)
