

Case study 419

Essex Council Needs Cooling

A district council, located in Essex contacted Andrews Air Conditioning Hire to help them overcome a temporary cooling problem within one of their buildings. The property was having its main heating and cooling plant replaced, but needed to provide their staff and visitors with temporary cooling whilst the main plant was out of action. Due to the restrictions that the building provided, the engineers responsible for the project needed some expert help and advice.

When they contacted our Basildon depot, we immediately arranged for one of our local air conditioning experts to visit the site the same day. A solution was provided quickly with twelve of our M900 evaporative coolers being delivered to site and placed strategically around the building.

The M900 is a small evaporative cooler, which is simple to operate and easily portable. This unit does not need any ducting or outside connections, so it is just plug in and start cooling. Evaporative coolers provide a cool breeze effect and are suitable for areas which have plenty of natural ventilation.

The hire was highly successful, the council staff was very happy with the equipment, and pleased that their staff could continue to work within a comfortable environment. Andrews Air Conditioning Hire has many years experience and acts quickly when customers need urgent cooling. Whether it be a planned project or an emergency requirement, we will be with you within 4 hours of your call.

Typical cooled area 24 m
Dimension 262 x 615 x 1,026 mm
Power supply 230 V 1 ph 50 Hz Run 0.4 A
Average power consumption 90 W/hr
Noise level (max) 63 dBA @ 1 metre
Average duty 2.1 ltr/hr
Weight 15 kg
Reservoir capacity 15 litres
