

Case study 127

Hospital requires supplemental heating

At Andrews Heat for Hire, we specialise in providing the healthcare sector with temporary climate control whenever requirements arise. As well as supplying hospitals, clinics and other NHS premises with rented equipment, we also offer a reliable contingency service to clients within your industry. As the UK's leading specialist hire company, we have the capacity to deliver small systems or even complete packages suitable for entire wards or care homes. We pride ourselves on responding to enquiries within four hours and have a large portfolio of existing clients in your field.

One of these – a specialist hospital in Bristol – approached us regarding a potential solution after on-site heating failed to adequately warm a waiting room. Additional units were therefore urgently needed to ensure patients remained comfortable after temperatures dropped unexpectedly. A member of our contact centre recommended a practical arrangement based on dimensions given over the phone, and delivery was organised via our local depot.

It was decided that four DE 25 electric fan heaters would be suitable for this particular assignment, and these were placed around the affected areas which enabled people to wait in comfort. Small in size, they can be discreetly deployed in virtually all surroundings while delivering large quantities of warm air.

This job came about as a result of a long-standing relationship between the hospital and our Bristol branch. As expected, the hire went very well, with our units remaining on the premises until the cold weather subsided.

Power supply 230V or 100V 1 ph 50 Hz,
Run 12.2 or 25.4 A
Noise level (max) 50.6 dBA @ 1 metre
Weight 11kg
Dimension 320 x 260 x 360 mm
Control DE25 Manual or DE25T Automatic
Plug type BS1363 230 V or BS4343 32 A 100V
Typical heated area 67.6 m
Power consumption (max) 2.8 kW/hr
