

Case study 141

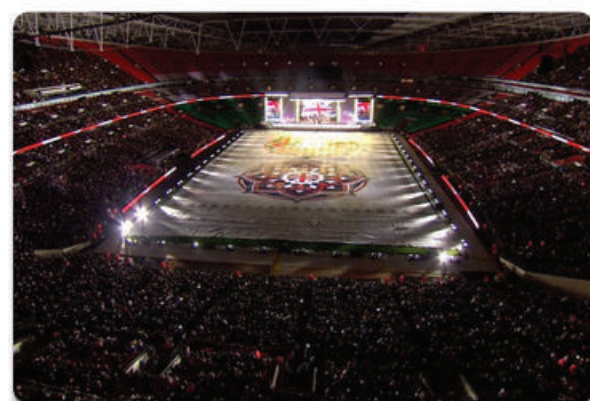

Andrews provide heating for Wembley event

In November 2015, the Indian Prime Minister hosted a mass rally at Wembley Stadium in front of 60,000 visitors. Mr. Modi had travelled to the UK to negotiate trade deals, solidify political relations and celebrate the importance of approximately 1.7 million British Indians. It had been estimated beforehand that the event would mark the largest reception ever received by a foreign head of government on British soil, and Andrews Heat for Hire were asked to help ensure the occasion was a success.

It was therefore our responsibility to keep dignitaries and performers warm while they were addressing the crowds of people present. Cold seasonal temperatures combined with an open roof meant a spot heating hire arrangement would be the most effective solution, and we sent a technician to ascertain how best to implement this.

There were two aspects to this assignment – providing spot heating directly onto the lectern and supplementing this with warm air coming from each corner of the stage. Our CT80 electric units have been specifically designed for awkward areas and can be fitted with up to five metres of flexible ducting – perfect in this case. A single model was therefore deployed directly below the target area and ducted upwards via a vent in the stage floor. Four high capacity DE190 heaters were then used to provide additional hot air from underneath the platform.

The entire system was installed 24 hours before the event began, allowing us enough time to source additional equipment should it have been required. Instead, the customer was extremely satisfied with the amount of heat being produced which enabled a prominent political figure to deliver an uplifting speech in comfort.

Heating duty (max) 20kW 68,240 btu
Air flow (max) 900m³/h
Typical heated area 483m³
Power supply 415V 3ph + E 50HZ
Generator size 25kVA
Plug type BS4343 32A 4pin 32A
Noise level (max) 62 dBA @ 1 metre
Weight 28kg
Dimensions (mm) 980 x 515 x 480
Control Integral thermostat
Average power consumption 20kW/h
