CASE STUDY

Temporary Cooling Keeps Major Televised Golf Event Running Smoothly

Our specialist teams were brought in to deliver a complete temporary cooling and ventilation package for one of the year's most high-profile televised golf events. With volunteers, media crews, broadcast staff and catering teams all working out of temporary marquees, keeping those spaces comfortable and workable was essential to keeping the event running.

This was a true collaboration: Andrews Chillers supplied the core cooling capacity, Andrews Air Conditioning delivered air handling and on-the-ground climate control across the site, and Andrews Ventilation provided the extraction that kept the catering marquee workable.

Alongside the marquee company, production team and generator power provider, our specialists planned each solution around the specific demands of every space from the volunteers' tent to the media and TV centre and the catering marquee.

1 CHALLENGE

Every marquee came with its own demands, so there was no one-size-fits-all approach. The Media Centre and TV Centre needed dependable cooling to keep teams and their broadcast AV equipment running through long days, while the catering marquee required extraction as well as cooling to handle the heat and airflow of feeding an event this size.

With several areas to cover, each with different requirements, close coordination between suppliers was essential.

2 SOLUTION

Drawing on kit from across our teams, we put together a combined cooling and extraction system tailored to the site:

- 1 x 150kW Heat Pump Fluid Chiller
- 1 x 50kW Series 2 Fluid Chiller
- 1 x 30kW HP Fluid Chiller
- 1 x Fast Chill 45 Series 2
- 15 x 15kW Chiller Fan Coil Series 2 Units
- 4 x Polar Wind Style Portable Air Conditioners
- 2 x AF3900 Ventilation Fans

3 OUTCOME

After several weeks of planning and close coordination, our Andrews teams delivered the temporary cooling and extraction needed across every key working area of the event. The chillers provided the core cooling capacity, the Fan Coil and Polar Wind units distributed conditioned air across the marquees, and the ventilation fans handled extraction where it was needed most.

Once in place, the system kept the volunteers, broadcast and catering teams comfortable from start to finish.
